Generative Engine Optimization (GEO)

Your Generative Engine Optimization is very good!

Congratulations, your Generative Engine Optimization (GEO) appears well positioned. GEO is important to ensure LLMs and AI Search Engines can effectively crawl your content and understand the underlying entity structure. Our knowledge of GEO is improving rapidly though, so stay on top of the latest understanding and optimizations.

Rendered Content (LLM Readability)

Your page has a low level of rendered content which tends to make it more readable for LLMs.

Rendering Percentage: 5%

llms.txt

Your website appears to have a llms.txt file.

llms.txt is a proposed standard for websites to guide large language models (LLMs) to better understand your site's content.

Top Pages by Backlinks

These are the pages on your site with the most the backlinks from other sites.

URL	BACKLINKS
https://ipocraft.com/	24

Top Anchors by Backlinks

These are the top pieces of Anchor Text we found used to link to your site.

ANCHOR	BACKLINKS
ipocraft.com	24

Top Referring Domain Geographies

These are the Top Geographies we have found linking to your site.

On-Page Link Structure

We found 78 total links. 9% of your links are external links and are sending authority to other sites. % of your links are nofollow links, meaning authority is not being passed to those destination pages.

Friendly Links

Some of your link URLs do not appear friendly to humans or search engines.

We would recommend making URLs as readable as possible by reducing length, file names, code strings and special characters.

Show Details

Usability

Your usability could be better

Your page is OK but could be more usable across devices. Usability is important to maximize your available audience and minimize user bounce rates (which can indirectly affect your search engine rankings).

Device Rendering

This check visually demonstrates how your page renders on different devices. It is important that your page is optimized for mobile and tablet experiences as today the majority of web traffic comes from these sources.

i

Google's Core Web Vitals

Your page has failed Google's Core Web Vitals assessment.

Core Web Vitals are UI metrics created by Google that measure page experience and are becoming increasingly important as a ranking factor.

Largest Contentful Paint (LCP)

Cumulative Layout Shift (CLS)

Core Web Vitals are UI Metrics designed by Google that measure the overall quality of user experience on your site. They assess things such as the appearance of content, interactivity of the page and visual stability from the moment of page load. Core Web Vitals are gathered from real world usage data of a website (hence some smaller websites that haven't been well sampled may not return an appropriate result). Google has made Core Web Vitals a ranking factor for pages with increasing importance.

To improve your Core Web Vitals scores, you may need to read Google's documentation on the topic and follow the recommendations provided in the Google's PageSpeed Insights assessment.

[Learn more in our guide](#)

Use of Mobile Viewports

Your page specifies a Viewport matching the device's size, allowing it to render appropriately across devices.

Google's PageSpeed Insights - Mobile

Google is indicating that your page is scoring poorly on their Mobile PageSpeed Insights evaluation.

Note that this evaluation is being performed from US servers and the results may differ slightly from an evaluation carried out from Google's PageSpeed Web Interface as that reporting localizes to the region in which you are running the report.

Google has indicated that the performance of a webpage is becoming more important from a user and subsequently ranking perspective.

LAB DATA	VALUE	OPPORTUNITIES	ESTIMATED SAVINGS
First Contentful Paint	2.3 s	Avoid multiple page redirects	1.68 s
Speed Index	4.6 s	Reduce initial server response time	0.94 s
Largest Contentful Paint	4.2 s	Reduce unused JavaScript	0.45 s
Time to Interactive	4.2 s		
Total Blocking Time	0.04 s		
Cumulative Layout Shift	0.032		

PageSpeed Insights is a tool from Google that evaluates a website's performance in both mobile and desktop, providing suggestions for how to improve it. Google has indicated that performance is becoming a more important ranking factor, so understanding Google's own analysis of your site is valuable. Also irrespective of SEO rankings, it has been well researched that pages that load faster perform better in user bounce rate and conversions.

We recommend reviewing and implementing some of Google's listed opportunities to improve your site.

- Flash Used?**

No Flash content has been identified on your page.

✓
- iFrames Used?**

There are no iFrames detected on your page.

✓
- Favicon**

Your page has specified a Favicon.

✓
- Email Privacy**

No email addresses have been found in plain text on your page.

✓
- Legible Font Sizes**

The text on your page appears to be legible across devices.

✓
- Tap Target Sizing**

The links and buttons on your page appear to be appropriately sized for a user to easily tap on a touchscreen.

✓

Performance Results

Your performance could be better

Your page's performance has some issues and room for improvement. Performance is important to ensure a good user experience, and reduced bounce rates (which can also indirectly affect your search engine rankings). We recommend addressing the highlighted factors below.

Website Load Speed

Your page loads slowly.

Page load speed is critical to ensuring good user experience and is becoming a more important ranking factor. Load speed can be impacted by a multitude of factors however and may need technical resources to investigate.

Server Response

All Page Content Loaded

All Page Scripts Complete

Website Download Size

Your page's file size is reasonably low which is good for Page Load Speed and user experience.

Download Page Size

Download Page Size Breakdown

Compression Usage (Gzip, Deflate, Brotli)

Your website appears to be using a reasonable level of compression.

Compression Rate

This page does not appear to have AMP Enabled.

Show Details

JavaScript Errors

Your page is not reporting any JavaScript errors.

HTTP2 Usage

Your website is using the recommended HTTP/2+ Protocol.

Optimize Images

All of the images on your page appear to be optimized.

Minification

All your JavaScript and CSS files appear to be minified.

Deprecated HTML

No deprecated HTML tags have been found within your page.

Inline Styles

Your page appears to be using Inline Styles.

Inline Styles are an older coding practice and discouraged in favor of using CSS style sheets, due to their ability to degrade page load performance and unnecessarily complicate HTML Code.

Show Details

HTML provides the ability to embed UI styling attributes within individual HTML elements. Despite this feature being available, it is modern best practice to completely separate UI styling into separate CSS files. This separates functions and centralises UI styling into one place making it easier for example to upgrade the UI styling of a site independently of the page content and structure. Inline Styles also have some particular problems in that they can degrade the page load performance of a page and unnecessarily complicate HTML code.

Inline Styles should be manually removed from the HTML code of a page and merged into separate CSS files, but may need the help of a designer to carefully consider their purpose and function.

Local SEO

Address & Phone Shown on Website

We can't identify one or both of these components on the page. Missing: Phone, Address

Address & phone number are key pieces of information for customers to contact a local business. However they also help Google identify that the website represents a particular local business to build a complete online profile helping it rank in local search results.

Ensure that your full business address and phone number are correct and clearly visible in clear text on the site and not hidden behind expanders or text that could load dynamically.

Local Business Schema

No Local Business Schema identified on the page.

Local Business Schema is a type of structured data markup that can be added to the code of a webpage. Adding accurate Local Business Schema categories helps Search Engines more understand your website and the business it represents so that it can rank in local search results.

The approach for adding Local Business Schema depends on your website's capabilities. Your CMS may have the ability to input this directly, or you may need to install a Schema app or plugin. Alternatively you can manually create your Schema through the use of an online Schema Generator tool and copy this into the code of your site.

Google Business Profile Identified
